What Is EMR Interoperability

As part of eHealth Saskatchewan's roadmap to improve the flow of data to and from Electronic Medical Records (EMRs) and other clinical systems, the EMR Interoperability (EMRI) initiative is offered to providers using Accuro and Med Access.

EMR interoperability enables the flow of clinical information from point of care systems to the provincial Electronic Health Record (eHR) and notifies providers that information is available for a patient.

EMRI has two main features:

1. To receive notification messages from eHealth in the EMR.
These messages notify care providers about new patient information available in the eHR viewer. EMRI supports the following provider and patient notification features:
 - a. Distribution of notifications for providers rostered patients.
A daily submission of care provider and patient roster information is sent from the EMR to eHS. This supports notifications routing to the correct care provider and clinic. It also provides a roster (list) of patients for each provider. Patient rosters consist of patients with that provider listed as the family provider (Accuro) and the primary provider (Med Access). In addition, the following criteria must be met to be included in the provider's patient list for Med Access.
 - The patient must have a visit or task assigned in the chart within the last 2 years.
 - The provider must be a member of the patient's primary location group
 - b. Distribution of provider-based notifications from eHS to the EMR or the eHR Viewer.
These notifications are sent to the provider listed on a document (i.e. family provider for hospital admission or CC provider on reports).
2. To send patient clinical data to eHealth for display in the eHR Viewer.
Transmitted data includes:

Note: this feature is currently available in Accuro. Target availability for Med Access is end of-2026.

How To Opt-In to Receive Notifications

Prerequisites:

- EMR is set up for launch-in-context (LIC)
- The provider has an eHR Viewer account (for the applicable organization)
- The provider has LIC enabled in the EMR (this can be requested with the notification request).

1. **Complete the eHS Request for Integrated Services Form:** Click on the following link to access the form: <https://www.ehealthsask.ca/forms/Forms/RequestForEMRIntegratedServices.pdf>
Please fill out all required fields accurately. It is important to include the EMR site admin/practice advisor/clinic manager to complete this process. Pages 1, 5 and 7 of the form are required for interoperability.
2. **Submit the Form to eHS:** After completing the form, email it to the eHS Service Desk at email: servicedesk@ehealthsask.ca. A ticket will be created for the request. A notification email is returned to confirm receipt of the request and provider with a ticket number. Please allow 3 - 4 weeks for this request to be processed.
3. eHS notifies the vendor to enable the interoperability module in the EMR and ensure providers listed on the request from are set up correctly.
4. eHS will notify the requester when the work is complete and provide an introduction and/or training on the functionality when requested.

Please direct any questions or concerns about the form or process to the eHS Service Desk at 1-888-316-7446 (local 306-337-0600) or email: servicedesk@ehealthsask.ca.

Notification Setup

EMR Interoperability offers various types of notifications. A provider can choose any or all the following:

Community EMR Visits with Other Care Provider	Consults and Referrals
Acute Care Admissions	Patient Profiles
Acute Care Discharges	Progress Notes
Patient Death	Operative and Procedure Reports
Medical Image Reports	Discharge and Transfers

Notifications are **configured in the eHR Viewer** (Electronic Health Record Viewer). Setup is completed by each provider in their eHR Viewer account.

Users can receive notifications in *either* the EMR or the eHR Viewer Account.

Two types of notifications are available:

- **Patient List:** List provided from the EMR or from the "Notification Patient List" in the EHR Viewer.
- **Listed Provider:** Results or documents where the provider is identified as the family provider (e.g. admission to hospital) or CC'd on the result.

To receive notifications in an **EMR**, the following criteria must be met for the provider and patient list/roster to be sent to eHS:

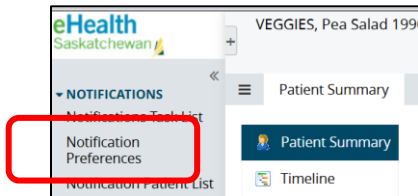

- The provider's user account in the EMR is Active.
- The provider is selected as the Office Provider (Accuro) or the Primary Provider (Med Access) in the patient's chart in the EMR.
- In Accuro, the provider is assigned to a User (Manage Security/Users)

When the above criteria are met, a list of patients is extracted which meets these criteria:

- Patient chart has a Primary/Office Provider
- Chart status is Active
- Patient has seen the primary provider within the last 24 months
- For Med Access, the provider must be a member of the patient's primary location group

Complete the following to set up notification preferences:

1. **Login** to the **eHR Viewer**.
2. **Navigate** to the **Notifications** section on left hand side of the screen and select **Notification Preferences**.

3. In the **Provider Notification Preferences Questionnaire**:

 A screenshot of the 'Provider Notification Preferences Questionnaire' form. At the top, it says 'Send notifications to my:'. Below this are three radio buttons: 'EMR' (which is selected), 'eHR Viewer Task List', and 'Opt Out of All Notifications'. Under the 'EMR' radio button, there is a dropdown menu labeled 'EMR:' which currently displays 'SK Primary Health Care Test Site 59'.

- **Select** the location notifications are to be sent, *either* **EMR Task List** OR **eHR Viewer Task List**.
Note: The **Opt Out of All Notifications** option at the top of the screen stops delivery of all notification immediately.
- When EMR Task List is selected, an EMR dropdown displays. **Select** the **applicable EMR** for notification delivery.
Note: notifications can only be routed to 1 EMR.
- **Select** the **types of notifications** to be sent to the EMR (or Viewer Task List). Choices are available for both the patient list and listed provider.
 - **Patient List:** list from the EMR containing patients for whom the provider is the Family or Primary Provider in the EMR.
 Clicking the **EHR** or **EMR** links below the Patient List heading displays a current list of patients identified to receive notifications.
 - **Listed Provider:** results or documents where the provider is identified as the family provider (e.g. admission to hospital) or CC'd on the result.**Note:** notifications for both patient list and listed provider can be selected.

Provider Notification Preferences Questionnaire

Send notifications to my:

☒ EMR ☐ eHR Viewer Task List ☐ Opt Out of All Notifications

EMR: **SK Primary Health Care Test Site 59**

Notification types I would like to receive for my patient list or when I'm listed as a receiving provider:

Patient List: List provided from your EMR or from the Notification Patient List
Listed Provider: Results or documents where you have been identified as the primary provider or CC'd on the result

Notification	Patient List EHR EMR	Listed Provider
Community EMR Visit with Other Care Providers	☒	☐
Acute Care Admission	☒	☒
Acute Care Discharge	☒	☒
Patient Death	☒	☐
Medical Imaging Report	☒	☒
Consults/Referrals	☒	☒
Patient Profile	☒	☒
Progress Notes	☒	☒
Operative/Procedure Reports	☒	☒
Discharge & Transfer	☒	☒
	☐	☐

[Save](#) [Reset](#) [View History](#)

- Click the **Save**. Changes on this screen can be made at any time and take effect immediately.

Selecting **View History** displays past preference choices.

4. This step is **only required** for providers opting to **receive notifications in the eHR Viewer!**

To receive notifications in the **eHR Viewer**, the provider manually creates a list of patients in the provider's eHR Viewer account. To build or access this list of patients, click the **Notification Patient List** option in the **menu on the left** side of the screen.

Notification Patient List [Rename](#) [Remove Sorting](#)

	Name	Age	Gender	
☐	BLUE, RIVER	1990-Sep-05 (35 years)	M	-
☐	BOOK, BLUE	1970-Dec-10 (54 years)	F	-
☐	BOXERDOG, OLIVEGREEN	1998-Jun-23 (27 years)	F	-

Notifications delivered to the eHR Viewer are only available from the provider's eHR Viewer account.

Click the **Notification Task List** option in the **menu on the left** side of the screen.

☒ New Community EMR Visit with Other Care Pro...
 EMROP, Eddard 27-Nov-20

Once displayed, the screen functions like the inbox of an email application. Messages can be read or deleted.

Receiving and Managing Notifications in the EMR

Notifications are delivered into the EMR as they are available in the eHS repositories, and as such arrive throughout the day. As with the delivery of electronic lab results, notifications are delivered by a system user – Date DI Integration. This user **must** be left as is and always remain active.

What notifications are available as part of EMR Interoperability?

Notification Types You Can Select	Notification Sub Types You Will Get	Source
Community EMR Visit with Other Care Providers	N/A	Accuro Med Access
Acute Care Admission	N/A - only for inpatient or emergency visits	SER / SCM / WinCIS
Acute Care Discharge	N/A - only for inpatient and emergency visits	SER / SCM / WinCIS
Patient Death	Presumed, Confirmed	SCI from fRegional SDT and PHRS
Medical Imaging Report	Ultrasound, General Radiology, Computed Tomography, Magnetic Resonance, Positron Emission Tomography, Mammography, Nuclear Medicine, Fluoroscopy, Angiography	RIS All acute instances of RIS, and the following community based radiology (CBR): Mayfair, Guardian, Saskatoon Medical Imaging (SMI), AR, and Prairie Sky Medical Imaging (PSMI)
Consults / Referrals	Consult, Letter, Infectious Disease Letter, Medical Genetics, ABCDP Letter, ABCDP Feeding Clinic, ABCDP Spinal Cord, ABCDP Team Assessment Report, Spine Pathway	mModal / SCA Documents mModal sources: all former health regions
	ED MD Assessment v2, MD Consultation Request, Emergency Department Physician Notes, SHA ED MD Assessment, PHY – MD Consult, COVID-19 ATC Note, Virtual Care Progress Note, MD Consultant Communication, SK Bleeding Disorder Treatment Protocol, Other Consultations, New Patient Consults	SCM Documents The following former region sources: CHR, FHHR, PNHR, PAPHR, RQHR, SKTNHR, SHR with a few exceptions
	ED – MD Assessment	SCM Documents / SCM Documents

Notification Types You Can Select	Notification Sub Types You Will Get	Source
Patient Profile	History & Physical, Outpatient Report, Mental Health Advance Care Plan, Orthotics, Infectious Disease Outpatient, Occupational Therapy, Physical Therapy, ABCDP Clinic Note, TB Prevention and Control Saskatchewan, Sleep Disorders Clinic	mModal mModal sources: all former health regions
Progress Notes	Inpatient Progress Note, ABCDP Speech, Language and Audiology Clinic Note, ABCDP Muscular Dystrophy Clinic Report, Physical Medicine and Rehabilitation Clinic Note, Physical Medicine & Rehabilitation Admin, Physical	mModal / SCA Documents mModal sources: all former health regions
	Medicine & Rehabilitation Multiple Sclerosis Clinic Note, Geriatrics Evaluation and Management Clinic Note	
	PHY – MD Assessment, MD Admission Note, Urgent History and Physical/Admission, Review/Follow-up	SCM Documents
Operative / Procedure Reports	Operative/Procedure Report, Vascular Lab, Non-Invasive Cardiology	mModal mModal sources: all former health regions
Discharge & Transfer	Discharge Summary	mModal / SCA Documents mModal sources: all former health regions
	PHY – MD Patient Discharge Summary, MD Discharge Summary Note, Stroke Discharge Document, Discharge from Physician, Discharge from Specialty, Discharge from SCA	SCM Documents The following former region sources: CHR, FHHR, PNHR, PAPHR, RQHR, SKTNHR, SHR with a few exception

Notification Delivery in Med Access

In Med Access, documents are delivered into task categories as follows:

Events/Documents	EMR Task Category/Med Access
Acute Care Admission	Attention!
Acute Care Discharge	Attention!
Patient Death	Attention!
Discharge & Transfer	Report
Operative/Procedure Reports	Report

Events/Documents	EMR Task Category/Med Access
Progress Notes	Report
Patient Profile	Report
Consults/Referrals	Consult
Medical Imaging Report	Investigation
Acute Care Discharge	Consult
Acute Care Admissions	Consult
Community EMR Visit	Report

If this default doesn't match the category usage standards for the EMR, ensure the individual tasks are changed to comply with standards or if appropriate the organization can choose to update the category mapping in Site Settings.

Notifications are found in the provider's **My Task** list.

Start:	All	End:	Today	Group:	All	Owner:	Emr, Telus	Category:	Exclude Visits	Type:	All	Description:	Status:	Active	Brief
Due				Patient											
08Oct25				Emrop, Lannister				Attention!		eHR Chart Update, Acute Care Admission					
10Oct25				Emrop, Lannister				Attention!		eHR Chart Update, Acute Care Admission					
10Oct25				Emrop, Lannister				Report, eHR Chart Update, Patient Profile - History and Physical							
10Oct25				Emrop, Lannister				Report, eHR Chart Update, Operative/Procedure Reports - Operative/Procedure Report							
10Oct25				Emrop, Lannister				Report, eHR Chart Update, Progress Note - Inpatient Progress Note							
10Oct25				Emrop, Lannister				Consult, eHR Chart Update, Consults/Referrals - Letter							
10Oct25				Veggies, Pea Salad				Attention!		eHR Chart Update, Acute Care Admission					
10Oct25				Veggies, Pea Salad				Attention!		eHR Chart Update, Acute Care Discharge					
10Oct25				Emrop, Lannister				Attention!		eHR Chart Update, Acute Care Discharge					
10Oct25				Veggies, Pea Salad				Consult, eHR Chart Update, Consults/Referrals - TS Single Visit Intervention-LPN/Mobilizer							
10Oct25				Veggies, Pea Salad				Report, eHR Chart Update, Patient Profile - History and Physical							

Notifications contain either a copy of the report on the right side of the task or have an option to view and download the document into the task.

The following is an example of a notification task with links to view or download the document:

The screenshot displays the 'Task' view for a user named 'Lannister Emrop' (34 years old). The task is categorized as 'Attention!' with a type of 'eHR Chart Update'. The description is 'Acute Care Admission'. A note is present, stating 'Acute Care Admission on 10/8/2025 11:06 AM CST at St Pauls Hospital/Saskatoon Health Region'. The task includes progress indicators and a link to view the document. The interface also shows a 'Task' section with a 'Category' dropdown set to 'Attention!', a 'Type' dropdown set to 'eHR Chart Update', and a 'Description' field containing 'Acute Care Admission'. There is a 'Note / Instructions' section with a text area for 'Enter new note/instructions here'. Below this, there are 'Progress Indicators' and a section for 'Assignees' with a dropdown for 'Emr, Telus'. The 'Start' date is '08-Oct-2025' and the 'Due' date is '08-Oct-2025'. The 'Urgency' is set to 'Normal' and the 'Recurrence' is set to 'None'. At the bottom, there are buttons for 'Save' and 'Preview'.

When the task contains the option to download, a request is sent back to eHS and the report is returned and the task updated with the report.

The following is an example of a notification task which includes the document (ignore the mismatch patient information as is for testing):

Last Updated: 29-Jun-2023 13:50 by Test, PT (Physical Therapist)

These tasks are handled as all other tasks, view, sign-off, create new task for follow up, etc.

Note: Source organizations which are still faxing results will continue to do so. As a result, duplicate tasks for the same information is likely. Clinics can implement processes to reduce the number of duplicate tasks. (e.g. one option could be that staff who file documents can review the chart to see if a notification has been received for that report and not fill the duplicate)

Misdirected notifications are to be handled following the same process used for misdirected lab results.

Med Access Resources from TELUS:

- User Guide
- eHR Viewer Access from within the EMR (LIC – launch in context)
- eHealth Integration
- Data sent to eHealth
- Preventing Data from being transmitted

Notifications in Accuro

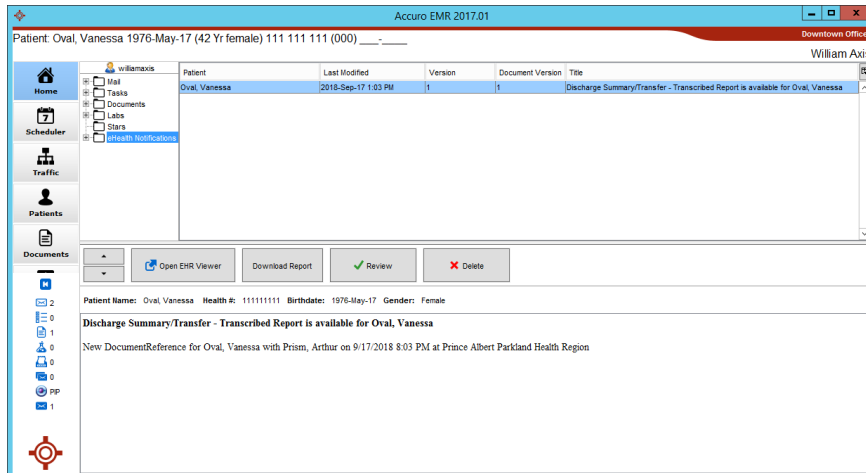

The same types of notifications are available in both EMRs. This list can be found at the beginning of the Notifications section of this document.

In Accuro, notifications are displayed in the **Home** section and within the **Virtual Chart tab** in the EMR section.

The notification area in Accuro displays unreviewed notifications sent by eHealth Saskatchewan and are found in the eHealth Notification folder, with unread notifications bolded.

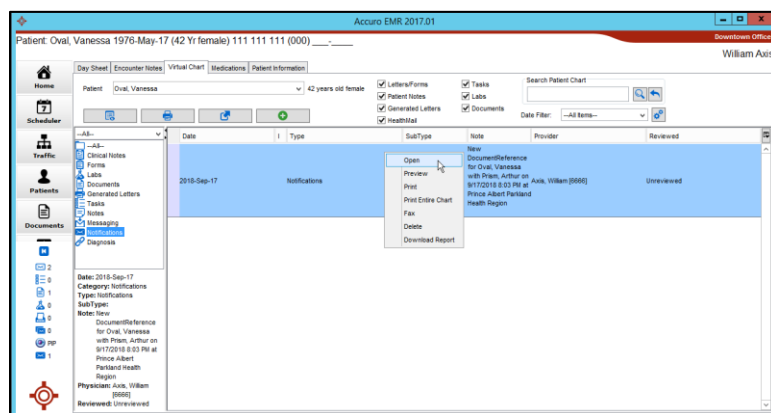

Double-click the **envelop** icon to navigate to the **Home** section and display received notifications.

Notifications matched to a patient are displayed in the **Home** section as well as in the Virtual Chart tab within the EMR section.

The following actions are available for notifications:

Action	Description
Open EHR Viewer	Button allows users to launch the EHR Viewer and view associated report.
Download Report	Button allows users to download, and store associated report from eHealth Saskatchewan into Accuro.
Review	Button allows users to flag the notification as reviewed. Note: The notification is removed from the Home section but is still available within the Virtual Chart tab in the EMR section
Delete	Button allow user to delete the notification. Note: The notification is removed from both the Home section and EMR section.

Right-click on a notification to access actions that can be performed for that notification.

Action	Description
Open	Allows users to launch the EHR Viewer and view associated report.
Preview	Allows users to display the notification details.

	Note: From the preview screen users can flag the notification as Reviewed and create Follow Up Requests.
Print	Allows users to print the notification details.
Print Entire Chart	Existing functionality
Fax	Allows users to fax the notification details.
Delete	Allows users to delete the notification. Note: The notification is removed from both the Home section and EMR section.
Download Report	Allows users to download and store the associated report from eHealth Saskatchewan to Accuro.

Download a Report

Accuro determines based on information in the notification message received from eHealth Saskatchewan if the referred report can be downloaded automatically, or to allow users to download the report on-demand.

Download Automatically

Accuro automatically downloads reports into the notification when the provider receiving the notification is identified on the document as the primary/family provider or CC'd on the result in the provincial eHR Viewer (listed provider).

The downloaded Report is available in the Documents node in the Home section for the provider to review like any other document.

Note: The notification is not displayed the Home section and the EMR section when a report is downloaded automatically.

Download On-demand

When the notification is received by a provider that is not a Listed Provider (i.e. not identified on the document as the primary provider, or CC'd on the result in the Viewer), the report can be downloaded on-demand from the within the notification.

Patient	Last Modified	Version	Document Version	Title
Oval, Vanessa	2018-Sep-17 1:03 PM	1	1	Discharge Summary/Transfer - Transcribed Report is available for Oval, Vanessa

Data Sent to eHealth from the EMRs

At a high level, the purpose of the EMR visit data export is to send information from an EMR (Accuro or Med Access) to the eHR Viewer.

The following is a high-level representation of the data exported from the EMR:

The following provides more detail on the data sent to the Viewer:

Resource	Data Elements
Patient Demographics	Last Name, Given Name, DOB, Gender, Identifier (HSN), Identifier Type, Address, Emergency Contact First Name, Emergency Contact Last Name, Emergency Contact Phone Number
Prescriptions / Medications	Name of prescribed medication, Strength and Unit of measure, Form, Dosage and Unit of measure, Frequency, Route, Prescribing Date
Allergies and Intolerances	Drug Allergen, Drug Intolerance Allergen, Non-Drug Allergen, Non-Drug Intolerance Allergen
Provider data	Role, Last Name, First Name, Middle Name, Expertise, Billing Number, Identifier, Identifier Authority
Service delivery location	Name, Type of Service, Address, Phone#, Fax Number, Site Name, Site Code, Location Code, Clinic Contacts
Appointment (Encounter / Visit)	Type, Reason, Diagnosis, Billing Code, Treatment Plan, Treatment Plan Date, Creation Date,

History of Problems – Conditions	Condition, Onset date
Lifestyle	Type, Description, Notes
Observations	Blood Pressure - Systolic and Diastolic, Height, Weight
Lab / Diagnostic Orders (Requisitions)	Only lab and diagnostic orders (requisitions) categorized as requisition forms are submitted to eHealth. Note: This is meant to indicate when labs and diagnostic orders have been given and includes only the requisition date and the name of the requisition. The actual requisition is <i>not</i> sent.
Immunizations	Category, Name, Recorded Date, Lot #
Surgical / Medical History	Procedure, Procedure Date
Clinical Notes	Assessment Notes and Treatment Plans are submitted to eHealth. Accuro sends Advanced Care Directives, however Med Access is not able to provide the document at this time – target availability mid-2026.

EMR Visit Data in the eHR Viewer

Visits exported to the eHR Viewer from either EMR are found in the **EMR Visit** or **Patient Summary** tabs in the patient's record in the Viewer.

- Access the Viewer either using **launch in context** in the patient chart in the EMR OR **log into the Viewer independently** and search for the patient.
- The **Patient Summary** is the landing page where a patient record is accessed.

Date	Location	Provider	Provider Role	Patient Reason	Clinical Diagnosis

Data Mapping from Accuro to the eHR Viewer

Interoperability and Export Conditions

For the Accuro EMR, several conditions must be met to support interoperability with the eHR Viewer. To ensure that a patient record is eligible for export, the following requirements must be satisfied:

- The patient must be assigned to an office provider.
- The assigned office provider must be verified in patient demographics.
- The assigned provider must be active and linked to a valid user account.
- The patient must have at least one appointment associated with the assigned provider.
- The patient record must be newly created or updated; this change event triggers the export when all other conditions are met.

Exported Data Elements

When the above conditions are met and a qualifying change occurs, the following data elements are exported from Accuro and made available in the eHR Viewer.

EMR Fields	eHR viewer fields	Exported Fields
Appointment Date, Appointment Time	Date	
Provider Name	Provider	

Role Mapping	Provider Role	
Reason (Appointment Details)	Patient Reason	
Diagnosis (SOAP Form)	Clinical Diagnosis	
Requisition Forms	Diagnostic Orders	
Surgical/Medical History	Surgical History	Performed Date, Procedure
Immunization Summary	Immunizations	
History of Problem	Conditions	Date of Onset, Description, Code
Lifestyle	Conditions	Type- Lifestyle Condition- Description

Data Mapping from Med Access to the eHR Viewer

Interoperability and Export Conditions

For the Med Access EMR, a defined set of conditions must be met to support interoperability with the eHR Viewer. These conditions determine whether a patient record is eligible for export and ensure that the appropriate clinical context is maintained.

The following requirements must be satisfied:

- The patient record must be active within Med Access.
- The patient record must be newly created or updated; qualifying updates trigger the export process when all other conditions are met.

Exported Data Elements

When the above conditions are satisfied and a triggering event occurs, Med Access exports key demographic and clinical data elements to the eHR Viewer. The following table outlines the typical mapping between Med Access EMR fields and eHR Viewer fields.

EMR Fields	eHR viewer fields	Exported Fields
Appointment Date, Appointment Time	Date	
Attending / Rendering Provider	Provider	
Provider Role	Provider Role	
Encounter Reason	Patient Reason	
Assessment / Diagnosis	Clinical Diagnosis	
Orders / Requisitions (not working)	Diagnostic Orders	
Medical / Surgical History	Surgical History	Performed Date, Procedure
Immunizations	Immunizations	
Problem List	Conditions	Date of Onset, Description, Code
Social History	Conditions	Type- Lifestyle Condition- Description
Advance Care Planning (not working)	Advance Directives	
Vitals (Height, Weight, Blood Pressure)	Observations	Height, Weight, BP

Allergies and Adverse Reactions	Possible Allergies & Intolerances	
Medications / Prescriptions	Prescribed Medications	
Progress Notes / Encounter Notes	Treatment Plan	DOS, Plan
